

Faculty

Russell Baer, DDS

Matthew Hallas, DMD

Dr. Russell Baer was a Clinical Associate Professor at the University of Chicago where he taught implant dentistry in the General Practice Residency and Maxillofacial Prosthodontics program and conducted clinical research in implantology and reconstructive dentistry. Dr. Baer is an active member of the Academy of Osseointegration and the International Congress of Oral Implantology. He has written numerous articles and lectured both nationally and internationally on implant dentistry.

Dr. Hallas received his Doctor of Dental Medicine (DMD) from Tufts University School of Dental Medicine in Boston MA. After graduation, he continued his education at University of Illinois at Chicago (UIC) – College of Dentistry, completing a 36 month residency in Prosthodontics in which he received extensive training in complex esthetic (cosmetic), restorative and surgical therapies, including dental implants. While at UIC, Dr. Hallas became highly skilled and knowledgeable in the latest technologies and utilization of dental materials including all ceramic restorations, CAD-CAM restorations, and computer guided implant surgery.

COURSE OBJECTIVE

GENERAL INFORMATION

Over the last few years, the US dental implant market has been growing at 12 to 15% per year and more and more members of our adult population have heard about implants. They are asking their general practitioners for implants as an alternative to standard crown and bridge restorations. So after more than 20 years, dental implants are becoming the standard of care and an extension of stand crown and bridge procedures.

The All on 4™ treatment concept offers a viable and cost-effective implant based solution for edentulous jaws that produces immediate function and full case rehabilitation. All on 4™ is a proven alternative to grafts and sinus lifts with its affordable screw retained prosthesis, which leads to shortened treatment time, leading to greater patient acceptance.

Course Content:

- Scientific evidence for All on 4™
- Background and clinical results
- Patient selection; indications and contraindications
- Pretreatment procedures
- Surgical protocol and review
- Conversion to a fixed temporary bridge
- Prosthetic protocol and considerations
- Prosthodontic rehabilitation options
- Medication protocol/maintenance
- Laboratory procedures
- Complications

Perhaps the greatest benefit of this course is to provide you with options for clinical support and training after the initial course ends. Dr. Baer will take emails and telephone calls from course participants with questions regarding cases.

Nobel Biocare USA, is an ADA CERP recognized provider
General concepts on this topic will be taught utilizing Nobel Biocare products and solutions.

Who should attend:

This course is intended for implant oriented dentists looking for an advanced hands-on experience or refresher program for All on 4™. This course will show you how the patient will have "immediate function" and excellent esthetics with a limited number of implants. This course will teach you the skills and know-how to treat edentulous patients using the All on 4™ protocol, from patient selection to treatment planning, all the way through to the fitting of the prosthesis so you can offer "immediate function" to your patients. If you are ready to expand your knowledge, this is the course for you.
